

Charles Harvey

Navigating the

Periodic Table

Objectives:

In this lesson, students will...

- ❑ Identify Dimitri Mendeleev as the “Father of the Modern Periodic Table”
- ❑ Distinguish between a Period and Group (family) on the Periodic Table of Elements.
- ❑ Given a group and family, identify the element at that location on the periodic table.

HS-PS1 (Next Generation Science Standards)
“Matter and its interactions”

Learning Targets

- I can identify the charge, relative mass, and significance of protons, neutrons, and electrons in an atom.
- I can analyze the location of an element on the period table to determine the number of protons, neutrons, and electrons, and valence electrons in an atom.
- I can classify elements as metals, nonmetals, or metalloids.
- I can evaluate the chemical and physical properties of families of the periodic table.

What do all of these have in common? (Hint: Think 'time')

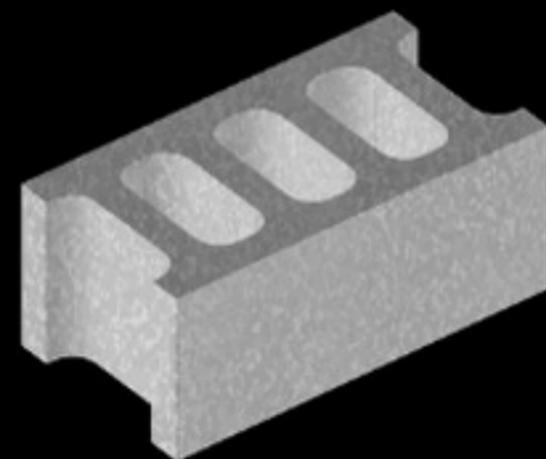

Share what you think - discuss with your neighbor

Open Ended Question

What do the items have in common?

What do all of these have in common?

Share what you think - discuss with your neighbor

Open Ended Question

What do these items have in common?

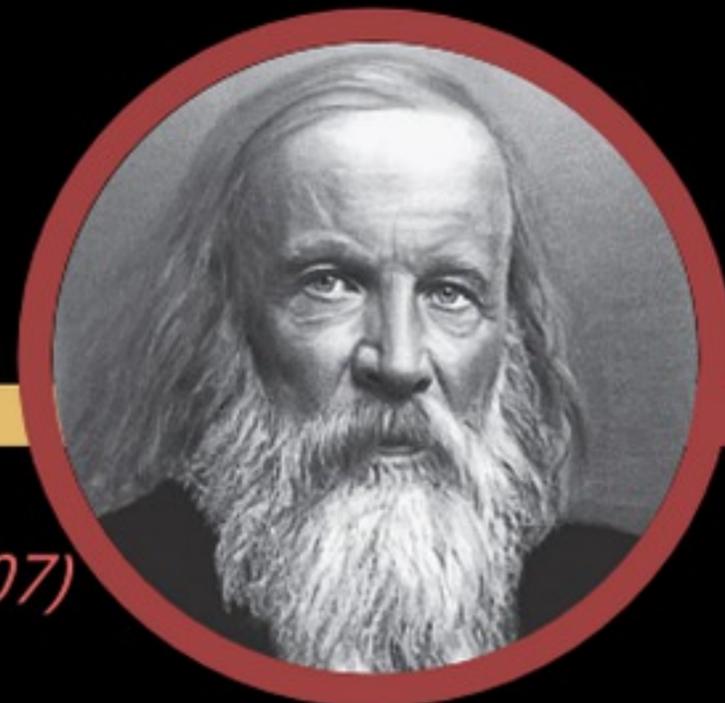

The Connection

These happen or occur on a regular, repeating pattern ("Periodicals")

All of these are made of matter, which ELEMENTS are the building blocks

Picking up on Patterns

Dimitri Mendeleev (1834 -1907)

- Russian chemist & inventor
- Considered to be the *“Father of the Modern Periodic Table”*
- “Pattern Pro” - identified **PERIODIC** patterns of properties in the known **ELEMENTS**

“Setting the Table”

- Mendeleev arranged the *known* chemical elements into a Periodic Table.
 - (Not all of the elements had been discovered)
- He predicted the location & properties of some yet undiscovered chemical elements!
 - When those elements were later discovered, it turned out that Mendeleev was correct in his prediction of their place and properties!

Open Ended Question

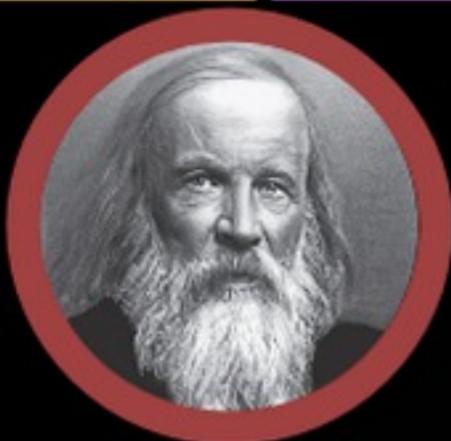

Mendeleev organized the periodic table according to atomic mass. Is this the way that the periodic table is organized today? If not, how is it organized?

Open Ended Question

What does it mean if something is "Periodic"?

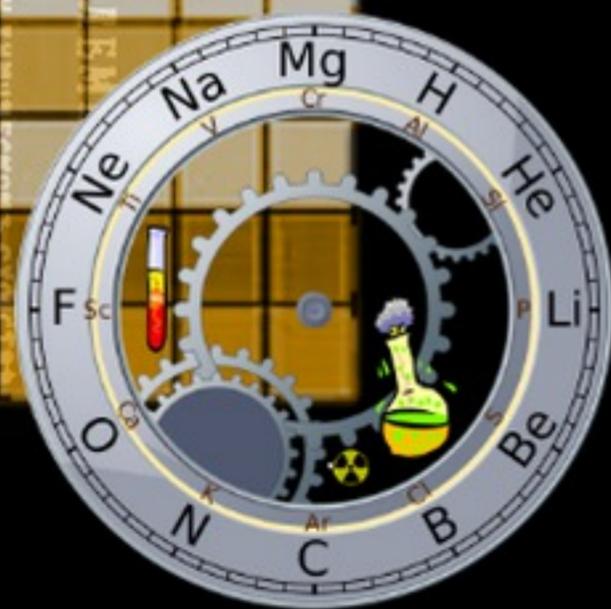

Fast Forward - Today's Table

COMPLETING THE PERIOD TABLE

Notice that the periodic table falls into seven numbered rows (going from left to right) and 18 numbered columns (going from top to bottom)

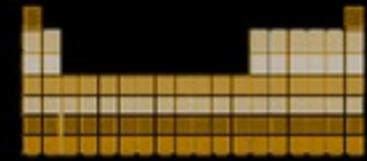

The ROWS are called PERIODS, and the columns are called FAMILIES (or GROUPS). Like human families, the various families of elements “look alike” in appearance and chemical behavior.

00:00

Today's Table: Lay of the land

HENRY MOSELEY (1887-1915)

- Mendeleev's version of the Periodic Table was not perfect. In a few cases, an element's atomic mass seemed to place it in the wrong family. The insight that would explain this problem and give the period table its final form was provided by a brilliant scientist named Henry Moseley.

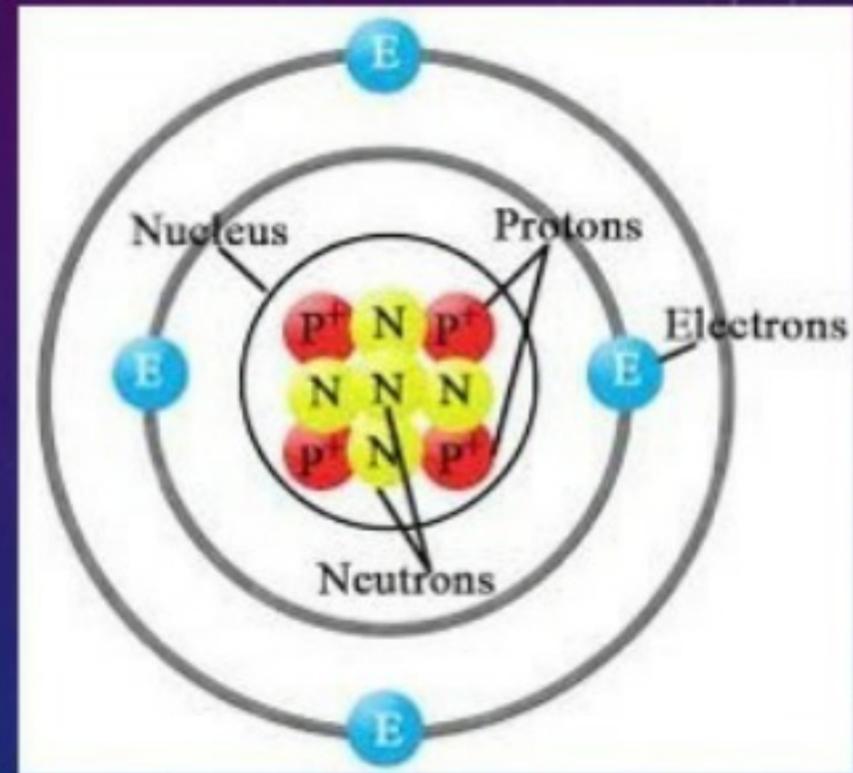

Working with X-rays, he was able to show that an element's properties were more dependent on the number of positively charged particles in an atom than that of its mass like Mendeleev believed.

00:00

PROTONS

- Those positively charged particles were later named PROTONS. The number of protons in the atom of a given element defines its atomic number, which is listed just above the element's chemical symbol in the table. When elements are listed by their atomic number, they all fall within the proper families.

00:00

Helpful HINTS:

PERIOD -

- rows
- horizontal
- going left to right
- like a sentence with a "period" at the end

GROUPS (families) -

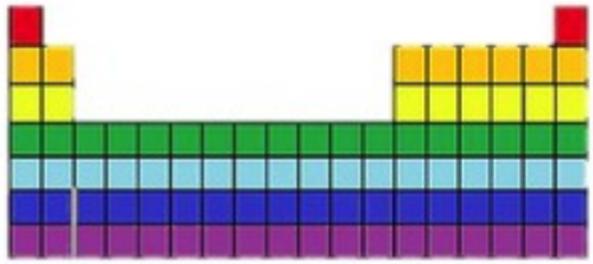

- columns
- vertical
- going top to bottom
- elements "look alike"
- "similar in appearance" like in a family

00:00

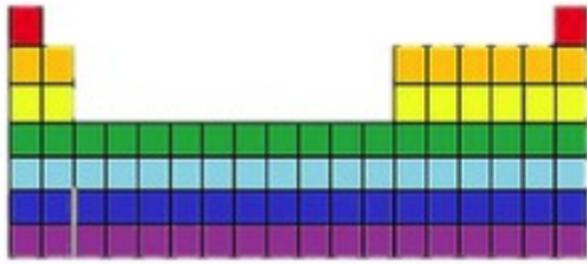

Quiz

Check Up

The horizontal rows on the periodic table of elements are known as

- rows
- building blocks
- families
- periods

The vertical columns on the periodic table are known as

- building blocks
- groups (or families)
- chemicals
- periodic

Quiz

Track it down...

What element is located in Group 2, Period 4?

Lithium (Li)

Calcium (Ca)

Gold (Au)

Carbon (C)

What element is located in Group 4, Period 5?

- Vanadium (V)
- Chromium (Cr)
- Zirconium (Zr)
- Niobium (Nb)

What element is located in Group 5, Period 4?

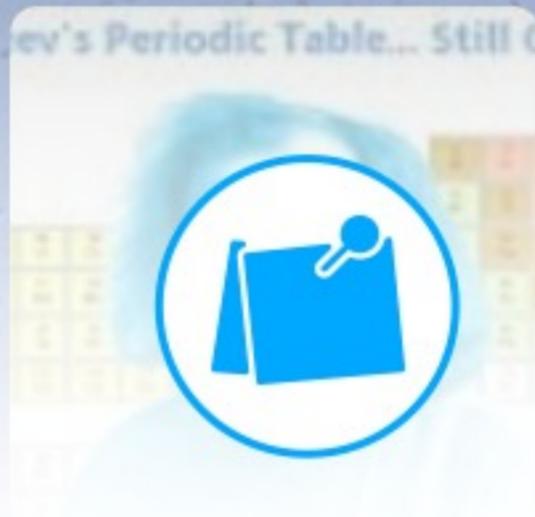

- Carbon (C)
- Chromium (Cr)
- Niobium (Nb)
- Vanadium (V)

LESSON REFLECTION

How do you feel about this topic?

Turn and talk with a partner. Share three interesting facts that you learned during this lesson.

The Period Table

Let's Play Periodic BINGO

RULES:

- Click on the link.
- select your card by click on the "new card" symbol at the top.
- select the correct box if your element is called, by selecting, an X will appear in the box.
- Do not delete your card if you call BINGO until I check that the winner has the correct elements. They may be wrong and the game will continue.

Navigating the Periodic Table - NearPod Presentation
Teacher's Notes & Resources

This presentation is a good start to introducing the basics of getting around on the periodic table. It can be followed up with information about reading a periodic table entry and explanations of atomic number, mass, symbols, and element names. Periodic trends and patterns should complete the information.
